BENEFITS OF PETIT BOUM

SENSORY STIMULATION

We are born with an immature sensory and cognitive system which has huge potential. Our sensory toys are wonderful companions for the adventure of development.

Sight

The combination of elements and objects has been designed so that the small ones can track them with their eyes as they move.

Hearing

The manipulation of our toys generates sounds that please and stimulate small kids. Different to rattles and other products, the bottles and sensory toys of Petit Boum allow the kid to identify and match those sounds with the different pieces found in them.

Touch and psychomotor skills

The weight, shape and size of our sensory toys are adapted so that kids can manipulate it, shake it, roll it... In this way they train their eye-hand coordination, brain lateralization and crawling abilities.

FAVOURS CONCENTRATION AND CALM

Watching the light and how glitter descends slowly kids can relax and focus in moments of agitation and anxiety.

SUPPORTS DEVELOPMENT

From the very first stimuli and babbling up until crawling and first words, Petit Boum is an evolutive toy that will support your baby with different stimuli and possibilities during the different development phases.

IT IS SAFE AND SUSTAINABLE

Petit Boum sensory toys and bottles are recyclable and are certified with the most strict safety standards (EN71-CE European Community). They are metal, BPA and halates free. Kids can manipulate and lick them without risk. For your peace of mind, the bottles are completely sealed with a double cap and do not break.

KM O

90% of proximity suppliers. In this way we can know the working and production conditions to guarantee the highest quality and less ecological impact.

NEWS

HAPPY BUBBLES

A sensory universe surrounds our new characterful friends inside their own floating bubble. For playing, inspecting, and being amazed at bath time or at the pool. Encourages concentration and fine motor skills.

FLOAT BOTTLES

LIGHT, COLOUR AND MAGIC

The rainbow at your fingertips. With these bottles, inspired by the colour range of nature, kids discover colours, marvel at the light and stimulate their concentration while finding their moment of calm. Use them with light tables for a magic effect, or let the child contemplate the glitter flow, sequins and pompoms while relaxing.

MOVE BOTTLES

DREAMS TO FLOAT

What would it be like to trap a dream inside a bottle? With this series we wanted to find out. We go one step further in the search for new sensory limits, with a new liquid with a floating effect that you are going to love. Every time the bottle is shaken... the journey begins! Planets, astronauts, animals... begin to float with the change in density of the liquid, in a bubble-filled daydream that captures your imagination and helps you feel relaxed.

SOUND BOTTLES

WATCH, SHAKE ... AND LISTEN!

As simple and as effective as that. The Sound Bottle small objects are a real show to our little ones. To the visual identification of the pieces inside, auditory stimulation is added, especially important in the first year of babies' life. It helps in the learning of sound discrimination: from the softest to the strongest, associating each sound with a meaning.

SPY BOTTLES

A MICROCOSM IN EACH BOTTLE

In each of the Spy Bottles we recreate a natural environment, with animals that will become the main characters of your children's imagination. Children will enjoy identifying the animals, imitating them, listing them and creating stories or simply learning about the different ecosystems. A real magnet for children's curiosity.

LEARN BOTTLES

LEARNING HAS NEVER BEEN SO FUN (OR DELICIOUS!)

With our new collection: Learn Bottles, the adventure begins as soon as the bottles are in your hands. Can you identify the ingredients of our succulent MacBoum menu? It's impossible not to make your mouth water. But maybe you prefer something more healthy? How about putting on your gardener hats and seeing how the harvest has turned out? This year we have bananas, strawberries, cucumbers, carrots... and many other fruits and vegetables freshly pulled from the earth. Identifying and describing all the pieces through play is an ideal way to learn spontaneously, while little ones relate different concepts and recognise shapes and colours.

Each Learn Bottle includes a booklet with suggested activities and a QR code with access to extra activities!

MY FIRST TOY

My First Toy
Ref: 47663

My First Toy consists of two toys designed for babies three months old and above: a bright colored, light cotton handkerchief and a Sound Bottle sensory bottle.

My First Toy, a toy for free and spontaneous play inspired by the Pikler pedagogy that stimulates sight, hearing and motor skills. The lightweight fabric of the Pikler handkerchief allows babies to get satisfaction when they manage to grasp it with their hands. In addition, the contrasting colours and colorful Polka dots handkerchief will stimulate their vision, still immature. For babies to play with it, the handkerchief can be placed near them forming a mountain-like shape while they are lying on their back. This way it is easy for them to see it

and hold it. The handkerchief encourages their spontaneous activity. They will quickly notice its presence and bring it to their mouth to explore.

The Sound Bottle created with the same colour scheme used in the handkerchief and which emits stimulating sounds that provide a unique sensory experience.

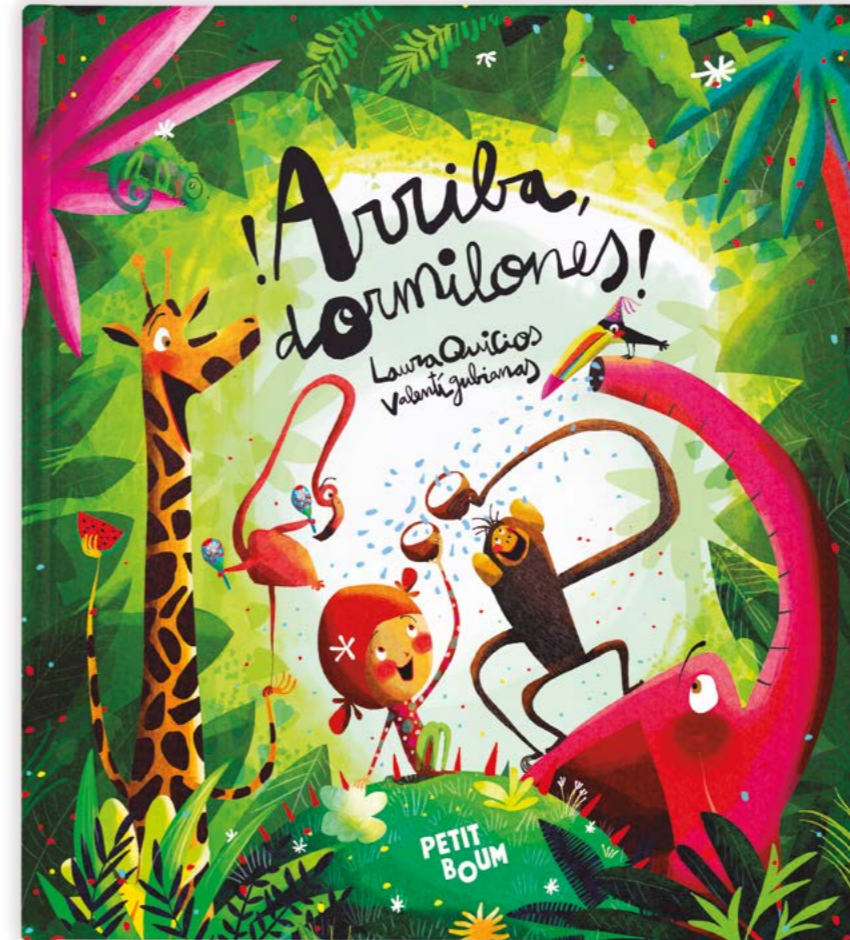

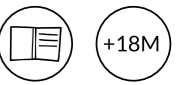

To start playing with the Sound Bottle, just shake it. In doing so, the elements it contains generate pleasant sounds that invite babies to follow the objects with their eyes and to identify the sounds of the different pieces.

Sensory bottles are great resources aiding the babies' development as they stimulate them towards experimentation and concentration.

Bottle size: 15,5 x 4,5 cm / **Capacity:** 250 ml
Fully sealed with double safety cap
Handkerchief size: 35x35 cm

WAKE UP, SLEEPYHEADS!

Sound Bottle Dragon
Ref: 85740

Wake up, sleepyheads! is our first book for all Petit Boum fans. The adventure continues in our Sound Bottle Dragon, which includes their new protagonist (a clue: it has wings and spits fire!).

Material: Cardboard
Pages number: 36 pages
Size: 23 x 26 cm
Weight: 367 gr

WOW BOTTLE

Wow Bottle
Ref: 47654

COLOR, TEXTURE AND MAGIC

WOW! is an endless universe for sensory stimulation that unfolds in front of kids and adults so they can experiment, create and imagine all while playing.

WOW! builds upon a basic element, sensory rice, and a set of tools and accessories. These can be combined with other objects and toys to expand even further their possibilities and to create miniature worlds for free and accompanied play.

Size: 25 x 7,5 cm / Capacity: 1 liter
Content: 800 gr / It opens easily

Contains:

- Coloured sensory rice
- Biodegradable paper bag with a spoon, a bowl, tweezers, a shovel and a brush
- Paper cards with game proposals
- Insect stickers
- Pom Poms

SENSORY DONUTS

Our new sensory toys will delight little ones. These smooth wooden rattles in the shape of a donut, are perfect for little hands to grip comfortably. Inside, you can identify yummy fruits and vegetables shapes, which, when shaken, unleash an irresistible sensory sound.

SENSORY BALLS

Sensory Balls
Ref: 47661

This selection of five balls offers varied unique sensory experiences thanks to the different natural materials chosen for each of them: metal, wood, wool, cork and cotton. Different weights, dimensions, temperature feelings and textures that bring endless possibilities for free and imaginative play.

From a very young age, children are naturally attracted to everything that moves and they are even more fascinated by the continuous movement of rolling objects. Therefore, these sensory balls are the door to a spontaneous play with which children will improve their motor skills and hand-eye coordination. Safe and easy to handle, these balls will help babies discover concepts such as distance and speed, train their strength and coordination. They will also stimulate crawling.

Beyond the benefits on motor, visual and tactile skills, playing with sensory balls allows children to feel they are in control of something beyond their own movements. Moreover, it improves their understanding of individual and social play: rolling a ball on the floor is a way to build a social bond between two people. It is also a lesson that children learn and which is necessary for their development: cause and effect or action-reaction.

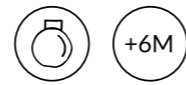

PALM LEAF BASKET
